Location : Hyderabad, India  
Contact : [+91 7670900985](tel:+917670900985)

## PROFESSIONAL SUMMARY :

---

I am Jayanth Karthikeya, a Computer Science undergraduate at Neil Gogte Institute of Technology, determined & proactive learner with research-oriented project experience spanning neural networks, graph-based learning, and transformer architectures. Designed and evaluated ML systems across multiple domains — customer behavior modeling, adaptive educational AI — using Python, TensorFlow. Built foundation in data preprocessing, model evaluation, and algorithm design & strengthening basics like Data Structures & Algorithms, OOPs, etc alongside. Aiming to advance through research and gain practical experience in a collaborative research environment.

## EDUCATION :

---

|                                                                                           |                  |
|-------------------------------------------------------------------------------------------|------------------|
| Bachelor of Computer Science – Software Engineering<br>Neil Gogte Institute of Technology | CGPA : 7.7       |
| Intermediate<br>Kendra Vidyalaya ( CBSE )                                                 | Percentage : 81% |
| Schooling<br>St. Joseph's Secondary School ( ICSE )                                       | Percentage : 94% |

## PROJECTS :

---

### PREDICTING SUBSCRIBER CHURN

November 2024 – January 2025

- Built an end-to-end ML Pipeline to predict the Customer Churn using 3-Layered ANN (Artificial Neural Networks) with 82% accuracy, performed comprehensive data-preprocessing on 10,000+ customer records. This project is designed to help businesses proactively retain valuable subscribers, showcasing practical approach the churn prediction.

### ADAPTIVE LEARNING PATH (ALP)

April – September 2025

- Developed an AI educational platform for children with learning difficulties using transformer based models with 85+% of accuracy in emotion detection. Designed Learning Algorithms that switch based on performance and expressional difficulty of child and reports to the therapist. This helps in improving learning outcomes as the paths are aligned with therapist recommended paths ensuring personalized learning & therapeutic goals are satisfied.

## SKILLS :

---

- Java
- C Language
- Python
- Object Oriented Programming
- Machine Learning – (Numpy, Neural Networks, etc)
- Data Visualization
- Data Structures & Algorithms
- SQL
